

Is it allergy or not?

*ImmunoCAP[®] Rapid
Wheeze/Rhinitis Child*

Test for allergy to these 10 common allergens with just one sample of blood:

- | | |
|--|--|
|  e1 Cat |  e5 Dog |
|  t3 Birch |  t9 Olive |
|  w6 Mugwort |  w21 Wall pellitory |
|  g6 Timothy |  d1 House dust mite |
|  f1 Egg white |  f2 Cow's milk |

Results direct – clear and simple

Wheeze

1 out of 3 preschool and 2 out of 3 school children with recurrent wheezing/coughing are allergic and may benefit from differential diagnosis and treatment. Which ones are they?

Symptoms

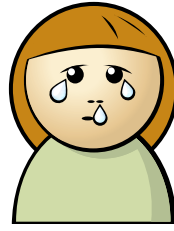

- Wheezing on expiration
- Cough
- Bronchospasm

Physical findings

- Prolonged expiration
- Wheeze on auscultation
- Reduced breathing sounds
- Use of auxiliary breathing muscles

And in severe cases:

- Poor growth
- Prominent sternum – “pigeon chest” with hyperinflation and lateral flattening

Rhinitis

Up to 7 out of 10 children with seasonal and perennial rhinitis are allergic and may benefit from differential diagnosis and treatment.

Which ones are they?

Symptoms

- Nasal congestion
- Sneezing and nasal discharge
- Itching eyes and nose
- Cough
- Fatigue
- Hearing loss

Physical findings

- Congested nasal mucosa – pale pink in acute phase, bluish grey in chronic situation
- Mouth breathing
- Cobblestoning of the conjunctivae
- Allergic shiner (discoloration and swelling below the lower eyelids)
- Transverse nasal crease (due to constant rubbing)
